Election/Restrictions

Group I. Claims 7-9,14, drawn to quantization, classified in class 382, subclass 251.

Group II. Claims 1-6,10-13, drawn to transforms, classified in class 382, subclass 276.

1. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I does not require the limitation of an inverse transform. The subcombination has separate utility such as transforming images.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
